Every receipt, captured automatically.

Kahler Automation's Bulk Receiving software automatically captures data during the receiving process. Product and supplier details can be entered in advance within Terminal Management TMX® or supplied when the load arrives, while liquid meters, belt scales, and truck scales record every delivery, so your inventory is accurate the moment it's received.

From the truck scale to the tank.

Liquid systems.
Liquid metering captures received product as it goes into your tanks, with devices such as magnetic flow meters measuring every delivery.

Dry systems.
Belt scales capture received dry product and record it directly into inventory.

Truck scale integration.
Capture received bulk product using truck scale readings for a complete record of every load.

Simple touchscreen entry.
Record quantity received, driver, transport, and bulk product right at the touchscreen.

Built-in quality assurance.
Destinations are set automatically, so every product goes to its assigned tank.

Remote management.
Access order entry, inventory, receipts, and reports through TMX from any device with a web browser, and receive load tickets and reports by email.

Accurate inventory.
Receipts post to inventory automatically, so your counts match what actually came in.

Easy to use.
Approved drivers or operations staff can document each delivery at the touchscreen, before or during unloading.

Efficient receiving.
Automated data capture reduces manual entry and keeps product moving from the truck to the tank.
