

A faster, simpler check-in experience.

Kahler Automation is evolving driver check-in by moving from traditional keypad panels to LOADPASS®, our mobile-based driver check-in platform. By allowing drivers to complete check-in from their phone before arriving on site, LOADPASS helps operations move trucks faster while improving safety and reducing congestion.

End of software support

MOVING TO MORE DIGITAL.

The KA-2025 keypad system has served customers well for many years. As mobile technology continues to improve site efficiency, Kahler Automation is transitioning to using LOADPASS for future driver check-in implementations.

Faster throughput

Drivers complete check-in before arriving, helping reduce wait times.

Reduced site congestion

Less time spent at check-in points keeps traffic flowing smoothly.

Improved driver experience

Simple mobile check-in eliminates keypad entry and confusion.

Less on-site hardware

Mobile check-in reduces reliance on keypad panels and simplifies infrastructure.

Improved site safety

Drivers can complete check-in from their cab using their mobile device, reducing the need to stop, exit the vehicle, or interact with equipment in active traffic areas.
