Fertilizer Truck Traffic Control

Efficient traffic management

High lights

The modular design allows customization of solutions to meet your current needs, plus the ability to expand in the future.

SECURED ACCESS

Allow only the proper vehicles gain access to your facility by controlling gates and doors with manual keypad entry or RFID readers. Ensure the right trucks get access to the right buildings.

COMMUNICATION CENTER

Simple prompts guide drivers through a quick check-in process with reduced touchpoints for both receiving & loadout. Key info such as company & load data is collected, linking it to the vehicle. Bay directions let drivers know where to proceed.

CONTROL ROOM

The office master station provides an intercom and image display monitor, allowing drivers to be seen and communicated with remotely. Staged orders are shown at the top of the order list to improve loadout efficiency.

TRAFFIC LIGHTS

Visual signals direct drivers to move onto or off a scale, into a receiving/loadout building, or anywhere necessary on a site.

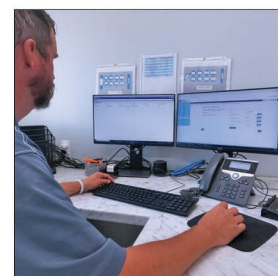

LOAD COMPLETION

Signature capture is an option to require drivers to sign and accept. Once complete, the system will print any tickets set up in the system.

BUSINESS INTEGRATION

Bring orders from your ERP via an interface to Terminal Management TMX. Driver-configured loading. Orders can be staged for efficient bay operations. Actuals are reported back for invoicing.
